DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 7 is rejected under 35 U.S.C. 102(b) as being anticipated by Lucke (1,833,166).

Lucke discloses a heat exchanger as claimed including a plurality of heat exchange plates (12) which are laminated at a predetermined interval (Fig. 1), first heat exchange portions positioned among the heat exchange plates and through which a first fluid stream passes, second heat exchange portions positioned along the heat exchange plates in turn with the first heat exchange portion and through which a second fluid stream passes, the first and second heat exchange portions being composed of a plurality of heat exchange members (12) having a predetermined length, and the heat exchange members being aligned at a predetermined interval (Fig. 1), first partitions (13) for closing the second heat exchange portions are attached on the both side surfaces through which the first fluid stream passes and second partitions (13) for closing the first heat exchange portion are attached on the other both side surfaces of the heat exchanger through which the second fluid stream passes. Note that the types of fluid used in the apparatus are considered to be a matter of intended use.

3. Claims 4-6 are allowed.
4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Simpelaar, Anderson, Kinsell et al, Abramzon et al, and Carpentier are cited to show partitions for closing the side surfaces of heat exchangers.
